April 13, 2021: COVID-19 confirmed Variant of Concern (VoC) cases reported by Health Authorities to BCCDC and confirmed by sequencing at BCCDC Public Health Laboratory

	Variant B.1.1.7 (United Kingdom)	Variant B.1.351 (South Africa)	Variant P.1 (Brazil)	Total
Total Cases ^{a,b,c,d}	3,627	65	1,529	5,221
New cases since April 9 ^e	545	10	555	1,110
<i>Health Authority</i>				
FHA	2,853	41	413	3,307
IHA	89	1	70	160
VIHA	19	2	11	32
NHA	18	1	1	20
VCH	646	20	1,034	1,700
Out of Canada	2	0	0	2

- Total confirmed COVID-19 VOC cases include lab diagnosed cases with WGS lineage confirmed by BCCDC public health laboratory and linked to public health data as of April 9, 2021 10 AM. As of April 1 2021, the BCCDC Public Health Lab modified its COVID-19 sequencing sampling strategy and no longer sequences all presumptive positive variants; only a subset are sequenced for confirmation.
- Residents of other Canadian provinces/territories are reported by their provinces/territories of residence.
- Cases are reported by health authority of residence. When health authority of residence is not available, cases are assigned to the health authority reporting the case. Cases whose primary residence is outside of Canada are reported as "Out of Canada". Please note that the health authority of residence and the health authority reporting the case do not necessarily indicate the location of exposure or transmission.
- "New" cases reflect the difference in counts between one day and the next (net new).
- Newly confirmed VOC cases had onset a few days to a few weeks earlier. They are not included in the "new case" counts in other COVID surveillance reports due to the time lag between the initial COVID diagnosis and sequencing. The prevalence of VOC cannot be derived using "new case" count data from the same day.
