## **AIDS IN BRITISH COLUMBIA**

Prior to 1997, AIDS case reports were electronically compiled courtesy of the Vancouver Health Department. We'd like to take this opportunity to thank the Vancouver Health Department for their assistance with the AIDS data. Their cooperation was essential to the preparation of past reports.

To avoid duplicate data entry and to improve timelines, we have decided to use AIDS data entered by the Division of HIV/AIDS Surveillance, Bureau of HIV/AIDS and STD, Laboratory Centre for Disease Control, Health Protection Branch, Health Canada.

Any potential discrepancies between reports from the first quarter of 1997 onward and previous AIDS Update reports may be attributed to the transition from the use of the Vancouver Health Department's AIDS data to the use of Health Canada's AIDS data.

Detailed pre-1994 statistics are not provided in this semi-annual report due to page limitations but are available upon request. Please forward your request to the STD/AIDS Resource Centre by telephoning (604) 660-2090, faxing (604) 775-0808, or writing to:

British Columbia Centre for Disease Control Society  
Division of STD/AIDS Control  
STD/AIDS Resource Centre  
655 West 12<sup>th</sup> Avenue  
Vancouver BC V5Z 4R4

### **Acknowledgements:**

Division of HIV/AIDS Surveillance, Bureau of HIV/AIDS and STD, Laboratory Centre for Disease Control, Health Protection Branch, Health Canada, for allowing us the use of their AIDS data.

Physicians, healthcare providers, and public health staff in British Columbia for taking the time and effort to complete and submit their AIDS case report forms.

Dr. Robert Hogg and Benita Yip from the BC Centre for Excellence in HIV/AIDS for their assistance in improving the reporting of new AIDS cases.

CENTRAL FRASER VALLEY - As of 1996, any AIDS case reports, by year of diagnosis, that fall within the areas previously served by Central Fraser Valley Health Unit will now be designated to the following health regions: Mission to Fraser Valley; Maple Ridge and Pitt Meadows to Simon Fraser; and Langley to South Fraser.

\* HEALTH REGION - An AIDS case report, by year of diagnosis, is designated to the appropriate HEALTH REGION according to the patient's place of residence at the time of his/her diagnosis of AIDS (i.e. first disease indicative of AIDS).

1999 figures are year end 1999.

AIDS case reports formally classified as "KS and PCP" are now classified as either "KS" or "PCP".

KS - Kaposi's sarcoma

PCP - Pneumocystis carinii pneumonia

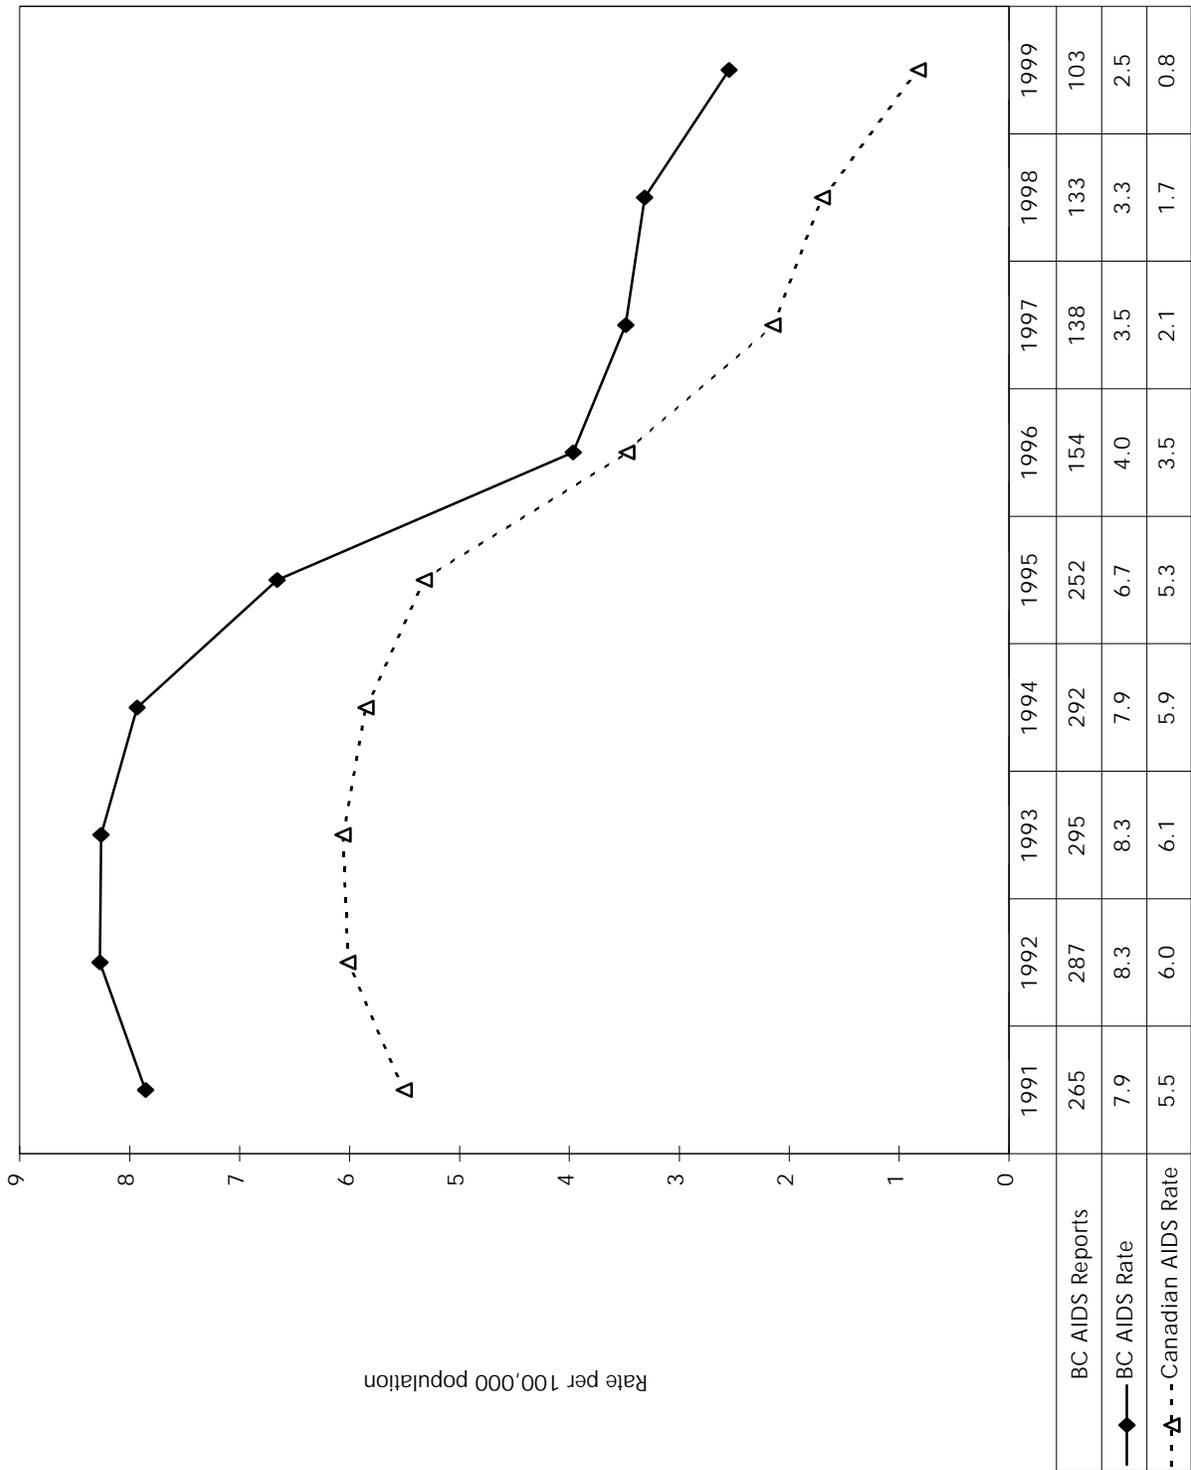

OI - other opportunistic infections

OM - other malignancies

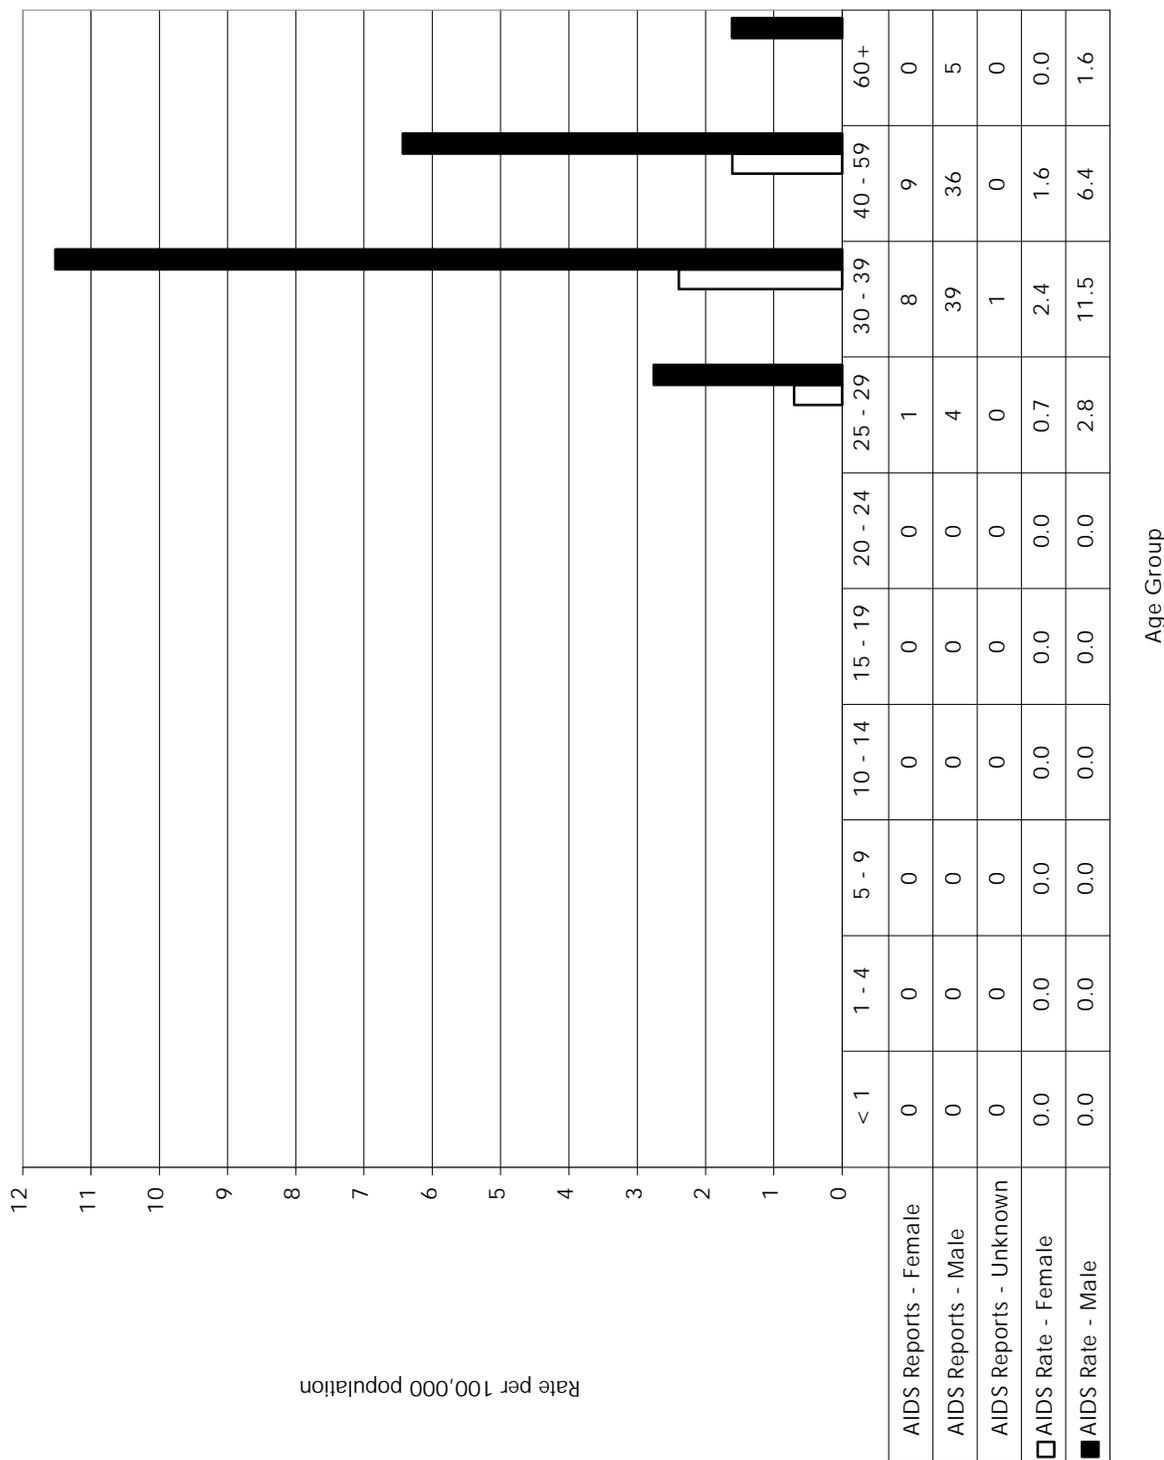

HIV WS - Wasting syndrome due to HIV

HIV ENC - Encephalopathy, HIV-related

## HIV IN BRITISH COLUMBIA

In many jurisdictions, the use of HIV testing data to obtain an accurate view of the epidemic has been hampered by concerns over confidentiality. Consequent omission of unique patient identifiers from testing requisitions and data sets lead to difficulty with identifying duplicate tests for the same individual and with obtaining missing risk and demographic data.

Some jurisdictions in Canada have chosen to address the above concerns by adopting a system of nominal testing and reporting. Rather than opting to modify a system of non-nominal HIV testing which has been accepted by physicians and community groups in British Columbia, the division of STD/AIDS Control sought to improve HIV surveillance by enhancing and making better use of non-nominal information already in place.

The non-nominal *Enhanced HIV Surveillance System* (HIVSS) involves the following:

- Reporting of all positive HIV tests from the Provincial Laboratory to a surveillance database.
- A computerized algorithm to identify duplicate HIV testing reports.
- A nurse/epidemiologist to perform follow-up on all positive HIV test reports with the submitting healthcare providers. This serves to obtain missing information, validate existing information, and resolve outstanding questions of duplication. Also at this time, a selection of resources for assistance in case management is offered. During this interaction, a nurse/epidemiologist does not request client names when codes or initials have been used on requisitions.

Interpretation of HIV Tables:

In previous *Reports* (pre-1997), the HIV tables represented the number of reactive test reports without the removal of duplicates. With the HIVSS in place since January 1995, duplicate HIV test reports are now identified and removed from the data set.

For HIV test reports between 1985 and 1994, duplicates were removed by automated methods only. Since 1995, however, HIV test reports have been carefully examined by BOTH automated and manual methods which thus further improve the detection of duplicates. HIV data in the following tables now more closely represent the number of individuals with a new positive HIV test report.

## Perinatal Transmission of HIV

Since HIV antibody status is not diagnostic prior to 18 months of age, HIV infections documented in this age group are confirmed through direct identification of HIV by PCR, p24 antigen testing and/or HIV culture on two or more consecutive assays.

Table 2.16 has been produced to more accurately indicate the number of perinatal HIV infections in British Columbia. The first row (maternal AB) indicates those <18 months of age with maternal antibodies for HIV whereas the second row (true infection) indicates those <18 months of age with true HIV infections.

Table 2.16

**Maternal Antibody Positive for HIV vs True HIV Infection - <18 MONTHS OF AGE, 1990 to 1999**

HIV	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	TOTAL
maternal AB	7	9	10	15	17	24	19	17	16	21	161
true infection	2	1	2	4	5	2	1	2	2	-	22

maternal AB - maternal antibody

TOTAL column to far right is cumulative from 1989 to year end 1999.

Since pregnancy is not an HIV risk category, a separate table (Table 2.17) has been prepared to monitor the number of pregnant women whose HIV test requisition stated that the test was being done as a prenatal assessment and of these women, the number who have tested positive for HIV. This does not include pregnant women tested for HIV whose requisition indicated a different risk or reason for testing, e.g. injection drug user.

Please note that the pregnant women who have tested positive for HIV are included in Table 2.7 - Persons Testing Newly Positive for HIV by Risk Category in accordance to their risk (e.g. heterosexual contact).

Table 2.17

**Women Testing Newly Positive for HIV - PRENATAL SCREENING, 1994(4) to 1999**

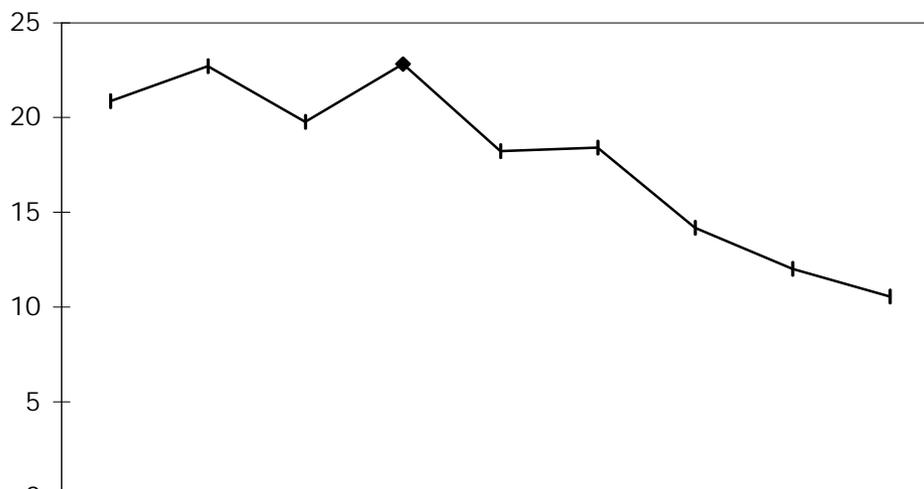

Gender	HIV	1994(4)	1995	1996	1997	1998	1999	TOTAL
male	persons					1		1
	tests		105	381	489	443	609	2,027

**Persons Testing Newly Positive for HIV by HEALTH REGION, 1999**

## HIV FOOTNOTES

No.	Risk Category	Footnote
(1)	blood/BP recipient	Follow-up is <u>not</u> done for each person testing newly positive for HIV in this risk category. Persons in this risk category are self-identified.
(2)	unspecified PE	Initially used on the requisition form to include IDU, blood/BP recipients, hospital incidents, and all other parenteral exposures. Unspecified PE was eliminated from the revised requisition form in August 1987, however, original requisitions continue to be received.
(3)	occupational EXP	Follow-up <u>is</u> done on each positive HIV test in this risk category to determine if the person's positive test is the result of a <u>true</u> occupational exposure.
(4)	other	Includes the following: endemic area immigrants; semen recipients; persons who frequent sex trade workers; and organ donors.
(5)	perinatal <18 mos	Since HIV antibody testing is not diagnostic prior to 18 months of age, HIV infections documented in this age group were confirmed through direct detection of HIV on two or more consecutive assays by PCR, p24 antigen testing and/or HIV culture.
(6)	delayed testing	A child infected through perinatal transmission who has not been previously identified prior to the age of 18 months by a direct detection method for HIV. This risk category was included in 1996.

No.	Specimen Source	Footnote
(7)	STD/A TEC Clinic	Both the STD and ATEC Clinic are located at 655 West 12 <sup>th</sup> Avenue in Vancouver.
(8)	STD/AIDS Out-reach	HIV testing is done at various sites in the Lower Mainland (e.g. jails, outreach clinics, detoxification centres) by outreach nurses from the AIDS Prevention Street Nurse Program.
(9)	VIDUS Study	To address the outbreak of HIV among IDUs, the BC Centre for Excellence in HIV/AIDS and the BC Centre for Disease Control Society initiated the VIDUS Study (an open cohort study) to investigate the determinants of HIV transmission and the progression of HIV in this client population.
(10)	downtown clinics	The downtown clinics provide medical, dental, pharmaceutical, nutritional, and other health care services to residents of Vancouver's Downtown Eastside.
(11)	corrections	Many inmates choose to get an HIV test done at the time of intake or when they perceive that they have been at risk of acquiring HIV.
(12)	UBC Virology Laboratory	UBC performs routine HIV antibody ELISA tests. Positive ELISA screens are always confirmed with Western Blots at the Provincial Laboratory.

### **To Recipients of the HIV/AIDS Update Semi-Annual reports:**

Please find enclosed the HIV/AIDS Update Year-end report for 1999. This will be the **last report** in this series which has previously been distributed on a semi-annual basis. Henceforth, a selection of the key HIV/AIDS tables and graphs will be posted on the British Columbia Centre for Disease Control (BCCDC) website ([www.bccdc.org](http://www.bccdc.org)) semi-annually.

The STD/AIDS Control Program will continue to publish and distribute an Annual Report which will now include a new section on HIV/AIDS beginning with the 2000 Annual Report. Summary data on HIV/AIDS in British Columbia will also be included in a new combined BCCDC Annual Report beginning with the 1999 BCCDC Annual Report which will be sent out shortly.

All of you who are on our mailing list for these HIV/AIDS Updates will also receive our Annual Reports.

I would like to take this opportunity to thank those who have worked on the HIV/AIDS Updates over the last decade:

Jacqueline Barnett	David M. Patrick
Lisa Elliot	Dorothy Rachar
Hugh Jones	Tony Rees
Linda Knowles	Daphne Spencer
Robbie G. MacDougall	Elsie Wong
Juanita Maginley	Laura Moore-Dempsey

Yours sincerely,
