

H7N9 Epidemic Curve

by place of residence and week of illness onset*

*Does not include: 1 Henan, 4 Jiangsu, and 1 Guizhou cases with unknown onset date; one asymptomatic case in Beijing. Latest case in Jiangsu plotted by reporting date pending availability of onset date.

H7N9 avian influenza first and second wave cases by province of residence

Province	Cumulative # of cases	Province	Cumulative # of cases
Anhui	20	Jiangsu	60
Beijing	6	Jiangxi	9
Fujian	22	Jilin	2
Guangdong	*114	Shandong	4
Guangxi	4	Shanghai	36
Guizhou	1	Xinjiang	3
Hebei	*1	Zhejiang	139
Henan	4	Hong Kong	6
Hunan	23	Taiwan	2
		Total	456

* Two cases with symptom onset in July 2013 (one in Hebei and one in Guangdong) are not represented on the map.
 ** Case was likely exposed in Zhejiang.
 † Cases reported travel to mainland China during exposure period.
 ‡ One case residing (and apparently exposed) in Guangdong was identified during travel to Malaysia, where the case was reported and hospitalised. Four other cases who lived in and were likely exposed in Guangdong were hospitalised and diagnosed in Hong Kong.
 Data compiled from ProMed, GPHIN alerts and other public reports. Map created October 31, 2014 by BCCDC.
