Minimum Dataset for Surveillance of
Vaccine-Preventable Diseases and Invasive Group A Streptococcal Disease

For invasive group A streptococcal disease and vaccine-preventable diseases with case report forms, minimum data elements are noted on the case report forms with an asterisk (*).

For vaccine-preventable diseases without case report forms, the minimum dataset for surveillance includes the data elements common to all diseases, specifically:

- Last Name
- First Name
- Date of Birth
- Gender
- Health Care Number (PHN)
- Health Region
- City
- Postal Code
- Disease
- Causative Agent
- Authority
- Classification
- Report Date (received)
- Test Name
- Specimen
- Collection Date
- Result / Interpreted Result
- Onset date or closest proxy
- Set as onset flag
- Aboriginal Data Standard
    - Do you wish to self-identify as an Aboriginal Person?
    - Aboriginal Identity Group
    - First Nations Status
    - First Nations On-Reserve Indicator

In addition to the data elements common to all diseases, the minimum dataset for vaccine-preventable diseases includes:

- Address at time of case
- Province at time of case
- Country
- Immunizing agent for this disease
- Date(s) of immunization for this disease
- Undocumented history of prior immunization for this disease
- Summary immunization status for this disease
- Reasons for delayed or non-vaccination against this disease
- Admitted to hospital

- *If admitted to hospital*, admission date
- Admitted to ICU
- Outcome
- Specify other outcome/permanent disability (if applicable)
- Outcome date; date of death is minimum if death occurred
- Cause of death
